

### NATURAL RESOURCES COMMISSION Information Bulletin #2 (Third Amendment)

**January 1, 2005**

**SUBJECT:** Roster of Indiana Animals and Plants that are Extirpated, Endangered, Threatened, or Rare. The list outlined here supersedes both Information Bulletin #2, *Roster of Indiana Animals and Plants which are Extirpated, Endangered, Threatened, Rare, or of Special Concern* (15 IR 848) and Information Bulletin #2, *Roster of Indiana Animals and Plants which are Extirpated, Endangered, Threatened, or Rare* (15 IR 1312).

#### **I. INTRODUCTION**

Following is a roster of animals, plants, and insects considered in Indiana by the department of natural resources to be extirpated, endangered, threatened or rare. The roster is intended to help identify these animals and plants; and the hope is that a better understanding of the fragility of these species will promote intelligent land use decisions. This roster may also be cross referenced in rules and other documents directed to land use management.

Inclusion of an animal or plant on the roster is determined based on the best current information available. Adjustments to the listing will be required, as additional data becomes available to the department and as the conditions of species change. For this reason, adjustments will be needed periodically to this roster; and those adjustments will be set forth in later editions of the roster.

Additional information concerning particular species included on the roster may be obtained from the department of natural resources. For more information, or to suggest additions, deletions or modifications to the listing, contact the following:

#### **II. INDIANA CLASSIFICATIONS**

This section sets forth the classifications used in Indiana for animals, other than insects, and for plants included on this roster. The somewhat modified classifications used for insects are set forth in section III (G).

“Extirpated” means an animal that has been absent from the state as a naturally occurring breeding population for over ten years, but exists elsewhere as a wild population. Extirpated plant species are those believed to be originally native to Indiana but without any currently known populations within the state.

“Endangered” means any animal species or subspecies whose prospects for survival or recruitment within the state are in immediate jeopardy and are in danger of disappearing from the state. This includes all species classified as endangered by the federal government that occur in Indiana.

“Threatened” means an animal species or subspecies that is likely to become endangered within the foreseeable future, including all species or subspecies classified as threatened by the federal government that occur in Indiana. (312 IAC 9-1-14). Endangered and threatened species receive the same protection under state law.

“Rare” means an animal species where some problems of limited abundance or distribution in Indiana are known or suspected and should be closely monitored. Plants known to occur currently on eleven to 20 sites are considered rare.

## G. INSECTS

### 1. Extirpated: An insect is considered state extirpated if any of the following three conditions occur: (a) A species is declared

extirpated by a specialist for the species, family, or order to which the insect belongs. (b) A species has not been located in Indiana as a naturally occurring breeding population for more than 15 years, but the species exists outside Indiana as a wild population. (c) A species appears on a federal list as being extirpated in Indiana. Applying this standard, the following species are believed extirpated in Indiana:

Ephemeroptera (Mayflies)

*Pentagenia robusta* "robust pentagenian burrowing mayfly"

2. Endangered: An insect species is considered state endangered if its prospects for survival or recruitment within Indiana are in immediate jeopardy, and is in danger of disappearing from the state, where any of the following three conditions occur: (a) A species which may occur in Indiana is classified as endangered by the federal government. (b) A species is biologically dependent on a threatened or endangered plant species. (c) A species is known from fewer than five sites in Indiana.

An insect is also considered endangered if the insect is listed as extirpated but is later rediscovered in Indiana, whether the population is endemic or believed to be recently adventive. The discovery of any life stage of an extirpated or endangered species is fiduciary evidence that a population exists.

An endangered species of insect does not include any of the following: (a) A species that is not known as a population in Indiana but which ranges into the state from Michigan, Ohio, Illinois, or Kentucky. (b) A nonregulated adventive species. (c) A species regulated under IC 14-24 and 312 IAC 18-3 (including a species used for biological control).

Applying this standard, the following insect species are listed as endangered:
